Report on 2020

Pollinator Habitat Creation & Enhancement

The Pollinator garden at our local hospital, described above.

Underground and auto-timed irrigation system at pollinator garden in progress

Completed underground and auto-timed irrigation system at pollinator garden

Education & Outreach

Due to the COVID-19 pandemic, activities were limited to the maintenance and expansion of a pollinator garden on the campus of our local Columbus Regional Medical Center. The Bee City Committee primarily handled the watering of the flowers, plants and vegetables. An underground timer-based irrigation system was installed, as was a permanent concrete table and bench for a place for quiet reflection for family and visitors of patients at the hospital.

Pediatrician, Dr. Elizabeth DeLouise, and her children enjoy the Community Garden at Columbus Regional Healthcare System!
