

Bee City USA Annual Report Pollinator Conservation & Education 2019

Webster, Florida

EDUCATION & OUTREACH

Mr. Harris doing the proclamation for the City Of Webster

City Of Webster pollinator habitat - a pollinator hotel!

This past year the City of Webster hosted a Q&A with Ms. Hale, a local nursery owner and pollinator preservationist. We also had a beekeeper come in and teach our community about bees and beekeeping.

This year will be having an Earth Day celebration and education event on the importance of planting pollinator plants. We also will be having several events in the third week of June for Pollinator Week. We will be donating pollinator preservation books to our local elementary school library to help continue the education of pollinators to our youth.

On our City website we share local beekeepers and classes they offer. This year we will now have a City of Webster Bee City Facebook page to share all our events and to educate our community.

We have monthly Bee City meetings to work on new ideas and set new goals for 2020. Our pledge this year is to educate more, and to be the best Bee City USA ever!

POLLINATOR HEALTH & HABITAT

Our City has planted beautiful pollinator gardens with native plants. We also have built several wonderful nesting habitats for our pollinators.

Our City Works department keeps the gardens well- maintained.

We welcome our community to come visit our gardens and nesting habitats. We also pass out pollinator preservation and education materials to everyone who visits.

POLICIES & PRACTICES

We only use organic pest removal in our pollinator gardens.

We have Bee City USA meetings once a month.
