

Bee City USA Annual Report Pollinator Conservation & Education 2019

Canon, Georgia

EDUCATION & OUTREACH

Karen educating children on the lifecycle of the bee

getting the community involved with painting their own bee hive

Doing an observation hive demonstration.

Class field trip picture

We hosted several events with local business Blue Haven Bee Company including hive demonstrations, student field trips, and a paint your own bee hive party.

We pride ourselves in Canon with having a constant outreach for bee education. Locals and travelers can visit Blue Haven Bee Company and taste different varieties of honey as well as get up close and personal with the bees via an observation hive.

POLLINATOR HEALTH & HABITAT

Preparing the ground for pollinator friendly plants.

Our new pollinator sign that we put up on our habitat day!

Our pollinator habitat space with bee hives.

We hosted and opened our pollinator friendly habitat. We invited the community to help clear the land as well as plant pollinator friendly plants. We have isolated about 20,000 square feet of land, and will

continue to bring the community in year after year to work on making it the best space for bee education and their health.

We have big plans for the coming years and hope to continue to grow our crowds each year to spread the love and importance of honey bees.

POLICIES & PRACTICES

We allow our pollinator habitat to be completely natural, with no use of pesticides.

We are constantly working on improving our bee city plan and will have more of this information in the future.
